

January 2000 (amended 2006)

FRANCO 'PONTORMO'

Spatola

Franco 'Pontormo' is a mineral lime putty plaster. It is supplied as a pre-mixed paste and is designed to be used internally as a through-coloured plaster.

GENERAL

Franco 'Pontormo', which is designed to be hand applied, can be finished in a variety of ways and has a high knock resistance. The raw materials and pigments are factory blended to give consistency in batching. Colour waxing and varnish techniques in finishing give 'Pontormo' its unique look and feel.

Suitable Surfaces:

Franco 'Pontormo' can be applied to various backing plasters, ideally a smooth multi-finish plaster surface.. Standard gypsum plasters are suitable for domestic or low-traffic areas. For a high knock-resistancy, or in showers, wet-rooms and swimming pool areas, use Franco 'Portofino'. A full specification is available for masonry substrates and cladding applications with calcium silicate or magnesium silicate boards.

DESCRIPTION

Franco 'Pontormo' is a multi-layered lime putty which is applied in several very fine coats. Typical finished thickness is 1mm including the primer.

Appearance:

Franco 'Pontormo' has a smooth, polished, mottled finish. It is a Venetian plaster that has depth and a high sheen and comes in a very wide range of colours.

Fire Resistance:

Franco 'Pontormo' is non-combustible and would be expected to meet a class 'O' fire rating when applied to non-combustible substrates.

Storage:

Franco 'Pontormo' should be stored in dry conditions, off the ground and above four degrees Celcius.

SITWORK

Preparation, Mixing and Application:

Individual specification required. An application service is offered by Franco Installations Ltd.

Coverage:

22 sq.m per 20kg tub with a 3 coat application. I

Supply and Price:

Franco 'Pontormo' comes in 20kg tubs. The current price should be ascertained from:
